Located in the heart of Richmond, VA, Stone Brewery is a 220,000-square-foot-facility that produces 600,000 barrels of beer per year. The project had a fast-tracked, 14-month schedule that required considerable planning to achieve, and project leaders tapped Tindall to get the job done quickly.
To meet the project’s ambitious timeline, Tindall worked with project leaders to evaluate challenges and develop customized engineered solutions. For this project, Tindall manufactured 79,000 square feet of insulated precast cladding panels that took only three weeks to erect. These sustainable panels contributed to the project’s goal of achieving LEED Silver certification while also creating architectural appeal. The raw steel and concrete finish blend with the natural surroundings to create a warm and inviting setting. Large windows allow natural lighting to flow in, creating a fresh, open space that appeals to visitors and employees alike.

In 2016, Stone Brewery won best project in the category of Manufacturing in ENR MidAtlantic’s Best Projects awards. Projects were selected by industry judges based on innovation, quality, and teamwork.
